**Incident Alert Systems (IAS) of Port Angeles, Washington Now Has Patents For Its
Computer Enabled, Incident Warning and Management System - Fast Alert® -
In Germany, Spain, France, the UK, Ireland, Italy and the Netherlands**

PORT ANGELES, WA—August, 2010—Incident Alert Systems (IAS) of Port Angeles, Washington - a leading provider of emergency warning and incident management communication systems for educational facilities and campuses of all grade levels - now has patents for the Fast Alert® incident warning and management system within the US, Canada and Europe. The recently granted European patent #1,789,936 for the Fast Alert® system has been registered by IAS for enforcement in Germany, Spain, France, the UK, Ireland, Italy and the Netherlands. The IAS Fast Alert® system assists school personnel in sending rapid alerts to selected facility areas in cases of potentially dangerous incidents, such as unauthorized persons on or near campus, criminal or violent episodes, hazardous weather or other unforeseen perilous events.

Tom Reyes, President of Incident Alert Systems states, "School violence is a global issue that many would say has become a worldwide public health concern. The importance of ensuring proper communications during life threatening events at schools and campuses is the inspiration behind Fast Alert® incident warning and management system. We are privileged to have our system installed in more than seventy schools here in Washington State and in several schools in California and Nevada. With the newly obtained European patent we foresee imminent installations throughout Europe, as well."

Fast Alert® is a multi-lingual, computer-enabled, incident warning system with mobile, all-platform, management capability, which can be activated by cell phone, PDA, tablet computer, laptop or desktop computer to provide real-time emergency notification between teachers, staff and first responders. Fast Alert® comes with a menu of alert options including lockdown, evacuation, shelter-in-place and all-clear alarms and can be installed in a number of configurations, the most common and economical being integration with an existing intercom system with a connection to the data network. By utilizing infrastructures already in place, the Fast Alert® system can be introduced as a retrofit upgrade at a very low cost, which is imperative in today's economy of budget cutbacks.

About Incident Alert Systems

Founded in 2004, Incident Alert Systems strives for the goal of preserving human life and providing a safe and healthy learning environment for children and educators. IAS works closely with agencies such as the Washington State School Safety Advisory Committee and the Washington Association of Sheriffs and Police Chiefs to ensure that all products meet the needs of those professionals who would be directly responsible for managing critical incidents.
