Franklin Pierce School District of Tacoma Selects Fast Alert® Emergency Warning And Incident Management System From Incident Alert Systems For Second High School Installation

PORT ANGELES, WA—May, 2009—Incident Alert Systems (IAS) of Port Angeles, Washington - a leading provider of emergency warning and incident management communication systems for educational facilities and campuses of all grade levels - announces the installation of its Fast Alert® incident management and security system to increase campus safety for the students, faculty and staff at Washington High School of Franklin Pierce School District.

Fast Alert is a computer-enabled, incident warning and management system, which provides direct and immediate communication (in one or more languages, as needed) between teachers, staff and first responders during emergency situations. Information about imminent or in-progress life threatening events such as on or near campus violence, or threat of violence, severe weather, or other emergency situations are instantly communicated by a secure computer network throughout any number of remote, related sites. The system can be activated by cell phone, PDA, tablet computer, laptop or desktop computer.

“With the unfortunate continuation of school tragedies that our country is facing, we recognize the need for superior emergency warning and incident management for schools of all levels,” said Tom Reyes, President and Co-founder of Incident Alert Systems. “This is why we created inexpensive, easy to use, emergency warning technology that is critical in keeping the students and faculty at our schools informed and safe.”

The US patented and International patents pending system can be installed in many configurations including connections with existing data networks and integration with existing intercom systems to provide immediate, accurate, emergency communication. This is the second installation of Fast Alert at a Franklin Pierce School District facility.

Franklin Pierce School District was established in 1949 and has a history of forward-thinking that helps it to provide safe, caring and highly successful schools for its approximately 950 employees and 7,900 students. The decision to provide a second high school with Fast Alert to deliver critical news and direction to students, faculty and staff in an emergency is indicative of its progressive character.

About Incident Alert Systems

Founded in 2004, Incident Alert Systems strives for the goal of preserving human life and providing a safe and healthy learning environment for children and educators. IAS works closely with agencies such as the Washington State School Safety Advisory Committee and the Washington Association of Sheriffs and Police Chiefs to ensure that all products meet the needs of those professionals who would be directly responsible for managing critical incidents.
